

Mini Project

Semester IV

Theory / Tutorial - 2

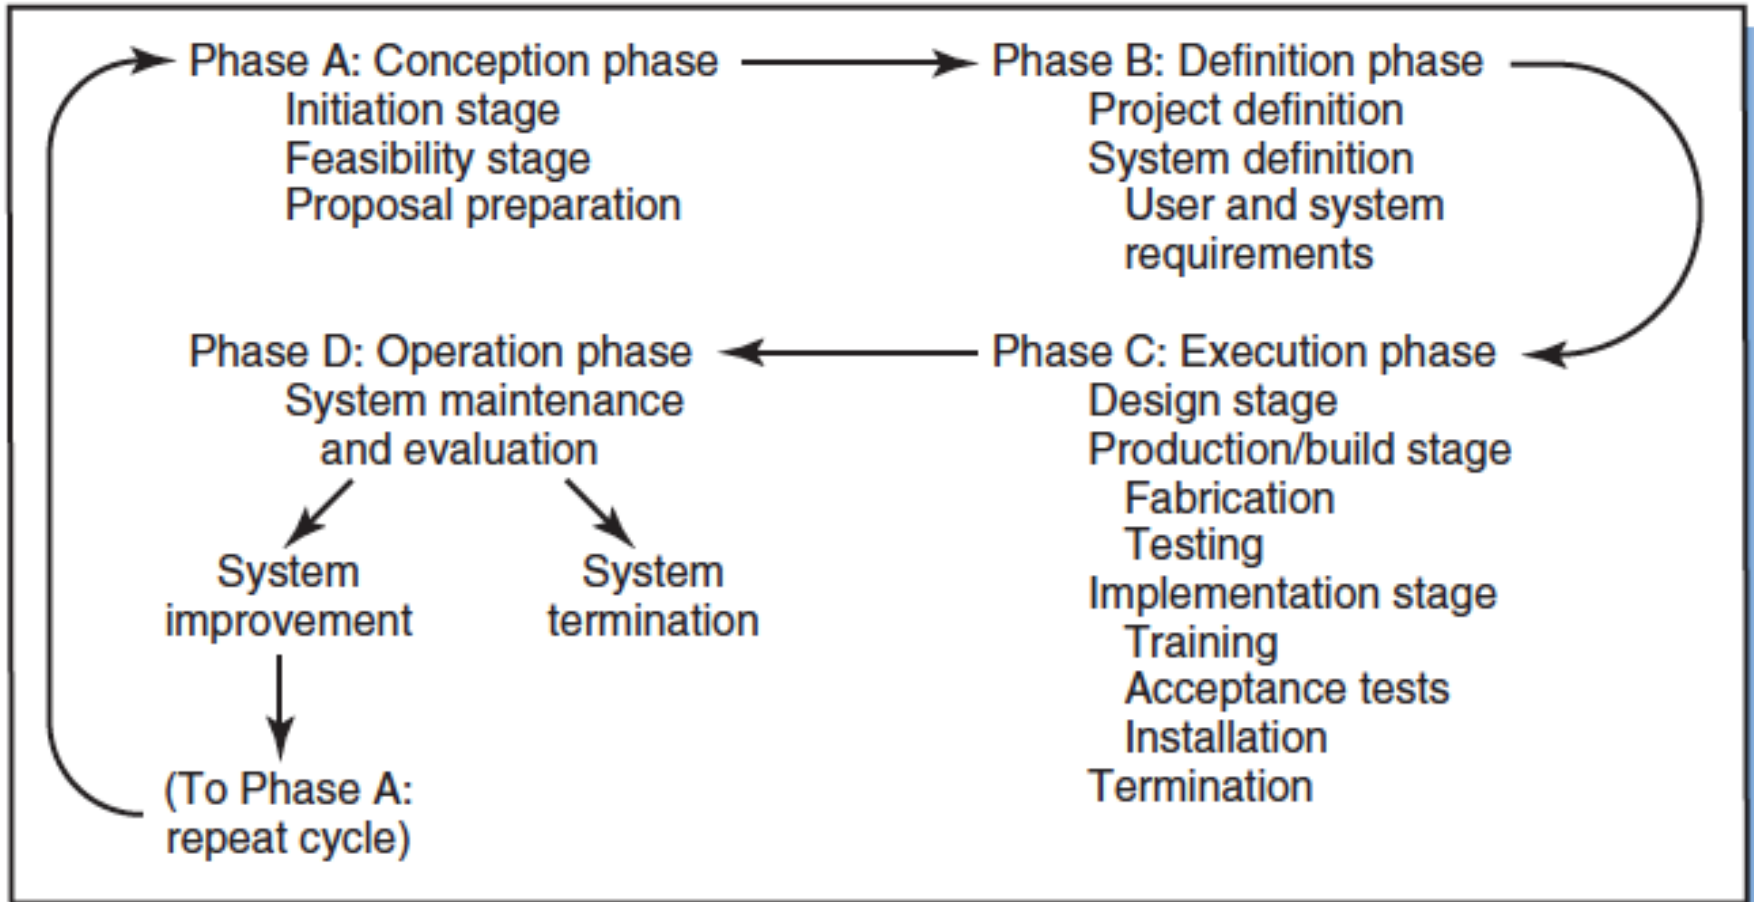

Project Development

- Program/ Product: Software code, End services or something tangible
- People: Developer, Clients and End Users
- Process: Hardware, product building, assembly, development of software
- Project: People + Process + Product

Project

- **“A project is a temporary endeavor undertaken to create a unique product or a service”**
 - Projects are often implemented as a means of achieving an organization’s strategic plan
 - May involve a single person or thousands of people
 - Duration may range from a few weeks to few years
 - May involve a single unit in the organization or may cross organizational boundaries, as in a joint ventures and partnering

Project

Project

Phase A: Conception Phase:

Initiation:

- Concept or idea (very vague): Typically a problem faced by someone in completing something.
- Generally described by a lay-man in English

Feasibility:

- Technical Feasibility
- Operational Feasibility
- Economic Feasibility
- Legal Feasibility
- Schedule Feasibility

Proposal Preparation:

- Solution developed by the same person who is having some difficulties
- Ask solution from some experts
- Investor/ Sponsor
- Solution Providing Organization
- Client/ End User

Project

Phase B: Definition Phase:

Project Definition:

- Prepare a reference document to be used by solution providing organization or by sponsor to understand **WHAT kind of issues are faced**

System Definition:

- Details of what exactly the solution should provide

User and System Requirements:

- Facilities to be provided in the system/ solution required

Project

Phase C: Execution Phase:

Design Phase:

- Concept or idea (very vague): Typically a problem faced by someone in completing something.
- Generally described by a lay-man in English

Production/ Build Stage:

- Coding
- Fabrication
- Testing

Implementation Stage (Commissioning):

- Training
- Acceptance Test
- Installation

Termination

Project

Phase D: Operation Phase:

System maintenance and evaluation:

- System Improvement
- System Termination

Project

Problem Definition:

- Clearly mention requirements
 - Requirement gathering mechanism:
 - Surveys and questionnaire
 - Interviews
 - Market Analysis
 - Competitors
- **Solution Design:**
 - Plan to provide successful product covering all requirements (SCOPE) in specified TIME, and in agreed upon COST
 - Parallel implementation of various module

Project

Problem Implementation:

- Code
- Implementation of Design
- **Testing:**
 - Acceptance testing
 - Modules testing
 - System testing
 - Improvements
